

Error with SSURGO Dataset Tool

Posted by Martin - 2008/09/16 04:57

I am trying to merge tabular datasets. As error pops up saying "A(n) Nil object does not recognize request GetSelection". I have no problem with merging spatial datasets but tabular datasets. Would you please help me?

Thank you very much

Hi,

We are aware of some problems with the SSURGO tool and will look into it.

Meanwhile, please check that your tables are formatted properly, and have the same number of fields and the same field headings.

We'll get back to you soon.

There is an updated version of AGWA 1.5 available in the Downloads section. Please download this and see if it fixes your problem.
